

## Assignment 3

# Endangered Species

## Poster *or* Power Point

<https://raysweb.net/specialplaces/pages/canada-es.html> \*

Your task is to prepare a power point or poster that presents information about a Canadian (preferably Atlantic Provinces) endangered species and suggest ideas that will help increase the population of that species and eliminate the risk of extinction.

Your information you must include:

- Identify the species (i.e. its common name and scientific name (Genus and species))
- Sketch or photo of species *must* be included
- Describe its normal habitat and place in a food chain (i.e. what does it eat, what eats it)
- State the reasons the species is placed on the endangered species list
- If the species is declining, explain the reasons for the decline in the population
- State what measures have been taken to protect the species; state any government or interest groups that have worked with the species.
- Suggest measures that can be taken to help reduce the human impact on the population.
- Research whether it will be possible to “save” the species.

*\*feel free to use other websites in your research, using Canadian references as much as possible.*
